Tower Elevator 高塔电梯

三荣高塔电梯主要用在特殊用途的独立高度（100-500米）结构设施上的专用电梯。采用独特的曳引机下置和抗摆幅反抗强干扰信号处理系统设计。由于钢丝绳的拉伸问题，专门设计了门区平滑端补偿装置，使得这种电梯的运行质量和普通电梯毫无区别。

The tower elevator is mainly used as the special elevator for the structure facilities at the independent height (100-500 meters) with special purpose. It is designed with the unique tractor equipped downwards and anti-swing and anti-strong interference signal processing system. Due to the extension of the steel rope, it is specially designed with the smooth creep compensation device in the door area that makes no difference in terms of the operating quality between this elevator and the regular.
